Machine Assisted Translation

Asad Abbas Tahir
Lecturer
Govt. Allama Iqbal Post-Graduate College, Sialkot

Abstract:

The workshop is intended to develop an awareness of the advantages using CAT (Computer/Machine-Assisted Translation) tools during the translation process. CAT program creates a "translation memory" (TM) of a translated document, which can then be used to facilitate the translation of future documents. This workshop focuses on giving hands on experience of OmegaT training. OmegaT is a free translation memory application proposed for professional translators. It is capable of fuzzy matching, simultaneous use of multiple Translation Memories, external Term Bases and it understands Translation Memory format TMX.
